

# **Summary Report for Chenango County Agricultural District # 1A**

Prepared by:  
Chenango County Department of Planning & Development  
September 2019

## **Executive Summary**

The Chenango County Planning Department and the Chenango County Agriculture and Farmland Protection Board (AFPB) received notice from New York State Ag and Markets on the need to review Chenango County Agricultural District #1A. Reviews are done every eight (8) years to determine changes to agricultural land in the reviewed district. These changes are sent to New York State Ag and Markets for review and acceptance as a viable Agricultural district.

The Chenango County Planning Department receives a list from the Chenango County Real Property Tax Department of all the properties in district #1A. The tax information is sorted to remove duplicate properties and property owners in order to generate letters that are sent to each property owner in the district. 3880 review sheets were sent out to property owners and asked to be returned by July 1<sup>st</sup>, 2019. The 1101 responses were sorted and used to determine if the property is used for farming, consists of viable or nonviable farmland, or if the property owner wishes to be removed from the district. Worksheets returned with “Please Remove”, “Not Used for Farming”, etc., were removed from the district. Property owners that did not respond and whose properties are less than one (1) acre were also removed.

The results from the data showed that District #1A is composed of 63.8% viable farmland. This keeps the district above over the 50% required by New York State Ag and Markets. The data was extrapolated to provide estimates of 101,637 acres in farms, 1,660 farms in the district, 93,937 acres farmed, and 7,700 acres rented and farmed. This information was compared to the 2011 review of Ag District #1A to show that 1932 acres were added to the district. However, an estimated 11,486 acres of farmland were lost, with an estimated 752 farm properties gained.

Ag District #1A is the largest of the three (3) Chenango County Agricultural Districts. The district is also the most prone to development due to its proximity to major transportation and economic sectors. It is the feeling of the AFPB that even though development of property is important; it should be done to minimize the loss of viable farmland. The pages below provide a more detailed process, data, and conclusions from the Ag District #1A review.

**DISTRICT IDENTIFICATION**

County: Chenango County				District No.: 1A
Town(s) in District Towns of Afton, Bainbridge, Coventry, Greene, Guilford, Norwich, Oxford, Smithville, the Villages of Afton, Bainbridge, Greene, Oxford, and the City of Norwich				
No. of acres in district: 167,035 Acres	No. of acres in this farms: <sup>1</sup> Estimated 101,637 Acres (+/- 1626)	No. of farms in this District: Estimated 1,660 farms (+/- 27)	No. of acres owned by farmers: Estimated 93,937 Acres (+/- 1503)	No. of acres rented by farmers: Estimated 7,700 Acres (+/- 123)

**AGRICULTURAL DATA ANALYSIS**

- A. Since last review, number of acres in District      Added: 1932      Deleted: \_\_\_\_\_
- B. Since last review, number of acres in farms      Increased: \_\_\_\_\_      Decreased: 11486
- C. Since last review, number of farms in District      Added : 752 farm properties      Deleted: \_\_\_\_\_

<sup>1</sup>Number of acres in farms represent the sum of acres owned by farmers and rented by farmers.

(Attach additional sheets if necessary)

## **Introduction**

The New York State Agricultural District Program exists through New York State Ag and Markets to protect current and future farmland from nonagricultural development pressures. Development of these resources could lead to ordinances that inhibit farming and a raise in farm taxes making farm development more difficult. At the County level, Chenango County is responsible for the creation, review, and management of State agricultural districts within Chenango County. Agriculture in Chenango County is one of the major economic factors in Chenango County. The socioeconomic of agriculture is vital to the economic stability, growth of local communities, and the growth of New York State and Chenango County.

New York States Agricultural District Law (ADL) requires Agricultural Districts to consist of more than 50% farmland. In 2010, it became clear to the Chenango County Agriculture and Farmland Protection Board (AFPB) and Chenango County Department of Planning and Development (Planning Department) that our agricultural districts were falling too close to the 50% majority and change was needed to increase viability.

The AFPB and Planning Department decided to merge the existing six districts into three and adopted a new layout along municipal boundaries. The towns within each district are chosen based on their geographic location and common features. Agricultural District #1A, #2A, and #3A were reviewed, finalized, and accepted by the NYS Department of Agriculture and Markets in 2012, 2014, and 2016 respectively.

Agricultural District #1A is predominantly located in the Towns of Afton, Bainbridge, Coventry, Greene, Guilford, Norwich, Oxford, Smithville, the Villages of Afton, Bainbridge, Greene, Oxford, and the City of Norwich.

Agricultural District #1A is the largest of the three districts in Chenango County. District #1A is the most vulnerable to land changes due to its proximity to major transportation routes, State Route 12 and Interstate 88, and proximity to industrial centers in the City of Norwich, Greene, Afton and Bainbridge. The 2019 Agricultural District #1A review will show how well the new district layout increased the amount of viable farmland.

## **Summary of Agricultural District #1A Review Process**

**Step 1:** When starting the review process of Agricultural District #1A, we first requested and obtained real property information from the Real Property Tax Department. The information is then sorted to remove duplicate properties and owners; this way property owner do not receive more than one notice. For Agricultural District #1A, worksheets were sent to approximately 3880 property owners.

**Step 2:** As worksheets were returned, the Planning Department utilized Real Property Tax information and reviewed each worksheet. Determined agricultural viability based on the property code, located on page 20, and information provided on the worksheet. Properties coded with 100s, 241, 321 to 323, and 900s were determined to be agriculturally viable. Properties coded differently and requesting to stay in the district were deemed not viable unless the information provided on the returned worksheet determined viability.

Some worksheets with phrases such as “Please Remove Me from the Agricultural District” or “No Reason to be in Agricultural District” written on them were removed. Worksheets that were not returned with parcels less than one (1) acre of land were also removed. These parcels, along with any publically owned lands (i.e. Chenango County), were decided to be “Exclusions”.

A chart of the “Exclusions” can be found on page 11.

A 30-day period in which property owners could include their properties within the agricultural district was also held during this time from June 1<sup>st</sup> to July 1<sup>st</sup>. Seven (7) property owners requested their parcel be included in the agricultural district.

A chart of the “Inclusions” can be found on page 18.

**Step 3:** Approximately 1101 worksheets were received by the July 1<sup>st</sup> deadline. The Planning Department then mapped the agricultural district including those properties deemed “viable”, “non-viable”, “inclusion” and “exclusions”. Worksheet data was compiled to determine the amount of viable land, number of farms in the district, the number of acres owned by farmers, and the number of acres rented by farmers.

**Step 4:** The updated Agricultural District will be presented to the AFPB for approval on July 19, 2019. The Planning Department will then present the updated Agricultural District #1A to the Agriculture, Building & Grounds Committee on August 20, 2019.

**Step 5:** The Planning Department will then present the updated Agricultural District #1A to the Board of Supervisors for a public hearing and their approval on September 9, 2019.

Once approved by all required bodies, the Planning Department will send the final map to Cornell University for posting, review and approval. The Planning Department will send the final report and map to the Commissioner of NYS Agriculture and Markets for review and approval. After approval by both agencies, the map becomes an official Agricultural District Map.

## **Data Analysis**

### **Response Rate:**

The number of those who sent responses into the Planning Department by the July 1 deadline, divided by the total number of letters sent out.

$$\begin{array}{r} 1,101 \text{ (Responses)} \\ \hline 3,880 \text{ (Total Number sent)} \end{array} \quad X \quad 100$$

Ag District 1A response rate = 28.4%

### **Agricultural Concentration Calculation (Viability):**

Equals the acres of agricultural land (code 100s) + rural res/res & ag prod (241) + abandoned/vacant land (321, 322, 323) + private forest acreage (900s) + acreage of lands deemed viable based on worksheet submissions, divided by the # of acres within the district.

$$\begin{array}{r} 106,917.3 \text{ (Total acreage of Viable land)} \\ \hline 167,035.21 \text{ (Total acreage in district)} \end{array} \quad X \quad 100$$

Ag District 1A viability = 63.8%

### **Determining the number of acres owned by farmers:**

Responses from the Ag District worksheet were analyzed to determine if the property owner was “farming”. The property was considered farmed if the property owner put in acreage that is used for farm operation. Out of 1101 responses, 471 indicated they were using the listed acreage for farming. By dividing the number of responses indicating farming by the number of responses received, we determined to have a 42.8% response rate of those who were farming.

$$\begin{array}{r} 471 \\ \hline 1101 \end{array} \quad X \quad 100$$

Response Rate of “farmers” = 42.8%

Next, the response rate (42.8%) multiplied by the total worksheets sent out (3880) determined the estimated number of farms in the district from those that did not respond. This gave us an estimated 1659.84 possible farms in the district.

.428 (Response Rate) X 3880 (Total Surveys Sent) = 1659.84 estimated farms

The estimated number of farms (1659.84) multiplied by the average acres respondents stated they farmed which was 35.41 determined the estimated acreage of farmed land from those that did not respond. The estimated acres farmed by those that did not respond is 58774.81 acres.

$$35.41 \times 1659.84 = 58774.81 \text{ estimated acres farmed}$$

The estimated acres of 58774.81 added to the 35162.13 acres of those that responded gave us 93936.94 estimated acres farmed in district 1A.

$$58774.81 + 35162.13 = 93936.94 \text{ total estimated acres farmed}$$

**Determining the number of acres rented by farmers:**

Responses from the Ag District worksheet were analyzed to determine if the property owner was “renting land”. The property is considered rented if the property owner put in acreage that are rented for a farm operation. Out of 1101 responses, 65 indicated they were renting property for farming. By dividing the number of responses indicating renting by the number of responses received, we determined to have a 5.9 % response rate of those who were renting extra acreage.

$$\begin{array}{r} 65 \\ \hline 1101 \\ \quad X 100 \\ \hline \end{array}$$

$$\text{Response Rate of “rented acreage”} = 5.9\%$$

Next, the response rate (5.9%) was multiplied by the total worksheets sent out (3880) to determine the estimated number of farmers who rent acreage in the district that did not respond. This gave us an estimated 229.06 possible farmers who rent acreage but did not respond.

$$.059 \text{ (Response Rate)} \times 3880 \text{ (Total Surveys Sent)} = 229.06 \text{ estimated farmers that rent}$$

The estimated number of farmers who rent acreage (229.06) was multiplied by the average acres responded stating they rent acreage, which was 6.30 to determine the estimated acreage of rented farmland from those that did not respond. The estimated rented acres by those that did not respond is 1443.27 acres.

$$6.30 \times 229.06 = 1443.27 \text{ estimated acres rented and farmed}$$

The estimated acres of 1443.27 was added to the 6256.61 acres of those that responded. This gave us the estimated number of rented acres farmed in district 1A at 7699.88 acres.

$$1443.27 + 6256.61 = 7699.88 \text{ total estimated rented acres rented and farmed}$$

### **Determining the number of acres in farms**

The estimated number of acreage in farming was determined by adding the estimated acres farmed (93936.94) and rented (7699.88). This gave us 101636.82 total estimated acreage used for farming in Ag District 1A.

$$93936.94 + 7699.88 = 101636.82 \text{ total estimated acres farmed}$$

### **Standard Deviation**

The above calculations were done with a confidence level of 95%. Using the formula:

$$E = z_{\alpha/2}/(2\sqrt{n}) \text{ or } 1.96/(2\sqrt{3880})$$

This resulted in a standard deviation of 1.5%

### **Numerical Summary of Agricultural District #1A**

1,660 Estimated farms	93,937 Total estimated acres farmed	1,443 Total estimated acres rented and farmed	101,637 Total estimated acres farmed	Ag District 1A viability of 63.8%	Ag District 1A response rate of 28.4%
-----------------------	-------------------------------------	---	--------------------------------------	-----------------------------------	---------------------------------------

The calculations resulted in a viability percentage of 63.8%. A total of 93,937 estimated acres are being farmed in district 1A. Of the 93,937 acres estimated farmed an estimated 1443 acres are rented and farmed. Using the estimated acres farmed and rented and farmed a total of 101,639 acres are estimated as being used for some farming purpose.

## **Exclusions**

The parcels listed below were deemed exclusions due to ineligibility, unlikelihood to ever return to an agricultural use or were asked to be removed by their respective owner. Worksheets that were not returned with parcels less than one (1) acre of land were also removed. 596 parcels totaling 3117.93 acres were excluded.

Figure 3: Map of Chenango County Ag District 1A after 2019 review

## **Conclusion**

Agricultural District #1A confirms Chenango County is, and continues to be, a viable farming community, while development pressures are severe compared to other districts in the County. Since the last review of District #1A an estimated 11,486 acres of farmland, along with an estimated 752 farm properties were gained. The loss of these acres could be attributed to the lack of economic/marketing opportunities for farm products, Industrial development on prime agricultural sites specific to regions close to major highways and the Delaware and Hudson Railroad, commercial and residential development pressures, fluctuating milk prices, and the effects of diminishing interest for farming by succeeding generations. The development pressures of alternative energy sources of solar and wind energy is a new challenge to farmland since the last review of District #1A

The most recent 2017 Agricultural Census through the USDA shows that New York State lost 2,099 farms since the 2012 Agricultural Census. This means an estimated 420 farms a year are lost in New York State. New York State lost 317,405 acres in farms since the 2012 census. That is an average of 63,481 acres a year. Chenango County lost 58 farms since the 2012 census with an estimated 11 farms ceasing operation a year. Chenango County also lost 18,244 acres of farmland since the 2012 census with 3,649 acres being lost a year. This would place the loss of 11,486 acres of farmland noted in the 2019 Ag District #1A results within the current trends revealed in the 2017 USDA Census. However the gain of 752 farm properties is not on pace with current trends when compared to State and County census data. That is most likely attributed to the loose definition of farming for the Ag district purpose. A stricture definition of farming such as the one the USDA uses for its census would present a representation of farms in Chenango County

As part of the 2012 Chenango County Agriculture and Farmland Protection Plan, the AFPB wrote a section denoting which lands are to be protected. The three categories of agricultural lands Chenango County wishes to protect include:

- All areas currently viable for agricultural production with increased options for grazing and other activities for which most of our lands are suitable.
- Prime soils and soils of statewide importance located within the three primary river valleys and scattered throughout the County.
- Agricultural lands located along the main transportation corridors of NYS Routes 7, 8, 12, 26, Interstate 88, and the Delaware and Hudson Railroad.

Chenango County lands viable in agricultural production are important to farmers and residents for both economic and aesthetic reasons. Upland farms, where prime soils are less common, are well suited for increased grazing options such as raising cattle, horses, sheep and other livestock. These farms are also suitable for growing crops such as corn, hay, soybeans, oats and other grains, as well as small to medium scale fruit and vegetable production. These farms provide the rural landscape and open space desired by many residents.

In order to minimize these impacts and protect the valued agriculture and farmland in Chenango County, the Chenango County Agriculture and Farmland Protection Board strives to:

- Encourage the utilization and expansion of the local Farmers Markets.
- Provide assistance with market research and marketing of farm products.
- Expand access to regional markets from Central New York to the Eastern Seaboard.
- Include agricultural land protection with other industry development planning.
- Develop a mechanism to monitor rural development and provide for uniform reporting to County Government by Towns regarding applications for and approvals of agricultural land use changes.
- Educate Town and County Boards on creating comprehensive land use plans and the application of legal mechanisms for protection of farmland.

The United States as a whole lost 67,083 farms from the 2012 to 2017 USDA Agricultural Census. The hope of the AFPB is that future State and Federal policies will help make farming more economically beneficial to those that practice it. In New York State the legalization of growing industrial hemp may help peak a new interest in farming and provide another cash crop for struggling farmers. Advances in farming technology have helped farmers do more with less land and fewer herds of farm animals. However, until policy and commodity prices change farmers will continue to struggle and more farmland will be lost.
